## Projects :

- <https://etisalatnews.com>  
this website is for Egyptian news, all the news has its own category so the news displayed depends on its category, it has a subscription flow because the content of this website is available only for the subscriber users, I created the subscription flow using a custom plugin which calls the API's that respond with the status of every user before the user logged in to the website.  
I created this website from scratch (frontend and backend) with a custom plugin
- <https://gbrands.com>  
This is the official website for Global Brands Group, the website was created from scratch with full custom code (UI and Back-end) without any page builders.
- <https://islamic5555.com>  
This website is for Islamic news and was created using custom code and without any page builder plugins, it also has a different subscription flow created using a custom plugin with a custom API.
- <https://thegorillafit.com>  
This website is for fitness and training, it's also created from scratch with its subscription flow with Orange service in Egypt using custom API that is integrated with a custom Plugin that was created.
- <https://el-la3eeb.com>  
This website is for news, reviews, and articles about games.  
it doesn't depend on adding content in the database from the admin page, it works with a cron job that every specific time will call the API that responds with the image, content, and category of the game then I add this data to the website

### **Technical Skills:**
